## Ingredient comments:

Dust contains respirable crystalline silica. Prolonged and/or massive inhalation of respirable crystalline silica dust may cause lung fibrosis, commonly referred to as silicosis. Principal symptoms of silicosis are cough and breathlessness. Occupational exposure to respirable dust should be monitored and controlled. The product should be handled using methods and techniques that minimise or eliminate dust generation. The product contains less than 1% w/w RCS (respirable crystalline silica) as determined by the SWERF method. The respirable crystalline silica content can be measured using the "Size-Weighted Respirable Fraction – SWERF" method.

## 8.2 Exposure controls

## Protective equipment

## Engineering measures:

Provide adequate ventilation. Observe occupational exposure limits and minimise the risk of inhalation of dust.

## Respiratory equipment:

No specific recommendation made, but respiratory protection must be used if the general level exceeds the recommended occupational exposure limit. Wear dust masks in dusty areas.

## Hand protection:

No specific hand protection noted, but gloves may still be advisable.

## Eye protection:

Wear dust resistant safety goggles where this is a danger of eye contact.

## Other protection:

Provide eyewash station.

## Hygiene measures:

Wash hands at the end of each work shift and before eating, smoking and using the toilet.
